1. Overview
   - A Psychiatric Interview of a standardized patient (one hour), which is recorded and observed by faculty positioned in a separate room. The interview takes approximately 40 minutes and the remaining time is devoted to discussion/debriefing with the faculty and the standardized patient. This study guide is for the psychiatric interview.

2. Goal of the OSCE time
   - Students will gain skills in interviewing, psychiatric assessment, diagnosis and treatment planning.
   - Student will screen the standardized patient for depression and suicide risk.

3. Required Reading / Review

4. Suggested Reference(s)

5. Required Procedure Competencies
   - Student will demonstrate growing understanding of the stages and components of a psychiatric interview.
   - Student performance will demonstrate skills in assessment of depression and suicidal ideation and risk.
   - The students are required to demonstrate basic competency by demonstration of the essential steps of the psychiatric interview.
