

## Dissertations, Open Access & Copyright

Students submitting dissertations through the Grad College are confronted with various options for how their work should be handled. Two of those options are whether or not to pay ProQuest to register copyright in the work and whether or not to pay ProQuest for open access with ProQuest.

The submission processing software used by the Grad College is provided by ProQuest. When a dissertation is submitted using this tool two copies are made. One goes to ProQuest for inclusion on their “ProQuest Dissertations and Theses Full Text” product. This is the standard international resource for finding dissertations and theses from around the world. Their standard process charges a fee for a copy of each work from which royalties are paid to the author when appropriate. The other copy goes to the UA Libraries to be included in the open access campus repository’s “University of Arizona Theses and Dissertations” collection. Thus the dissertation is made openly available by the university. Students wanting to have ProQuest also make their work open access are charged an additional fee as part of ProQuest’s business model relies on revenue from sales of copies.

Both of these deposits are dependent on the student author signing a license that allows each organization to make the dissertation available in any way all. Student authors are asked to sign these two licenses, as they are the copyright owner in the work as soon as it is fixed on a hard drive. Copyright registration is an option for those authors who want additional protection. Copyright registration has two major advantages. One advantage is that it gets the work listed in the national registry and documents ownership there. The other advantage of registration is that it allows a copyright owner to sue for infringement and receive statutory damages. Copyright owners can enforce their rights short of suing, but if an author wants or needs to get the courts involved, registration is necessary. ProQuest offers copyright registration as an additional fee-based service. For a somewhat lower fee, an author can also register the work with the U.S. Copyright Office themselves at <http://copyright.gov/eco/>.
